CAPABILITY STATEMENT

TUNGSTEN NDT SERVICE LLC

About us

Nondestructive testing (NDT) is a wide group of analysis techniques used in science and technology industry to evaluate the properties of a material, component or system without causing damage. Because NDT does not permanently alter the article being inspected, it is a highly valuable technique that can save both money and time in product evaluation, troubleshooting, and research. The six most frequently used NDT methods are eddy-current, magnetic-particle, liquid penetrant, radiographic, ultrasonic, and visual testing. NDT is commonly used in forensic engineering, mechanical engineering, petroleum engineering, electrical engineering, civil engineering, systems engineering, aeronautical engineering, medicine, and art.

Core Values

Safety

All incidents are preventable.

Integrity

Do the right thing every time, under all circumstances.

Ownership

It's our job to own every job we take and to ensure we provide cost-effective solutions that provide our customers with the best possible service.

Innovation

We invest heavily in new ideas, new technology, and training our team in new possibilities so we can present every option to solve your challenges at the most economical cost possible.

Codes

NAICS CODE: 54130
